

Womo-Reise — README

This file describes how to install the software and how to start it for the first time. Please read it completely before downloading and installing.

Status: May 2026

Requirements

Windows, Linux or Android. About 200 MB of disk space.

Additional space for your own data (database, photos, tracks, PDFs) as needed.

Installation

Windows — Installer version (recommended)

1. Download the file Womo-Reise-Setup.exe from the downloads page.
2. Double-click the file. If Windows shows a security warning: click “More info” and then “Run anyway”.
3. Follow the installation steps. Womo-Reise is installed by default in C:\Program Files\Womo-Reise and creates an entry in the Start menu.
4. Your application data will be stored under C:\Users\\AppData\Roaming\Womo-Reise.

Windows — Portable version

1. Download the file Womo-Reise-Windows.zip.
2. Extract the ZIP archive. You can place the contents in any folder, for example on a USB stick.
3. In the extracted folder, double-click the file Womo-Reise.exe.
4. Your application data will be stored under C:\Users\\AppData\Roaming\Womo-Reise.

Linux

1. Download the file Womo-Reise.AppImage.
2. Make the file executable. Either through the file manager properties (right-click → Properties → “Allow executing file as program”) or in the terminal:
`chmod +x Womo-Reise.AppImage`
3. Double-click the file or start it from the terminal:
`./Womo-Reise.AppImage`
4. Your application data will be stored under `~/.local/share/Womo-Reise`.
5. You can also create an entry in the application menu. The way to do this depends on your Linux distribution and desktop environment.

Android

1. Transfer the file Womo-Reise.apk to your Android device.
2. In the Android settings, go to Apps → Special app access → Install unknown apps and give your file manager or browser permission to install APKs. The exact path may differ depending on the Android version and the device manufacturer.
3. Tap the file in the file manager and confirm the installation.
4. Your application data will be stored in the device's internal app storage.

First start

When you start the program for the first time, the form for creating a vehicle opens automatically. Womo-Reise is vehicle-based — no other module works without an active vehicle. This is the first and only required step.

The most important entries are the fuel types: diesel or petrol, optionally also gas (LPG) and AdBlue. Your choice here controls what will be available later in the fuel module.

Once the vehicle is created, the main screen appears with all modules. You can now optionally create a first trip (via Travel diary → create / delete new trip). But this is not required — fuel entries and expenses can also be recorded without a specific trip. They will then be assigned to the default category “General — no trip”.

Further help

The full user manual describes all modules in detail. It is available on the downloads page as a PDF (German and English) and is also available inside the software through the Help menu.

If you have problems, questions or want to report a bug, you can reach the author by email at mail@womo-reise.org.
